- Replacement of defective valve parts
- Replacement of corroded valve parts
- Torque stud bolts / nuts
- Milling of valve bore and valve gate for GWERT
- Milling / drilling of scale for GWERT
- Repair corroded or thinned anchor casing
- Repair defective wellhead equipment
- Post weld heat treating

TNG Energy Services is a rigless geothermal wellhead repair company, that prides itself on operational efficiency, safety and mobility anywhere in the world.

TNG operates the Geothermal Wellhead Equipment Repair Tool (GWERT). This tool is a downhole packer designed to be set in HPHT geothermal wells. The packer is rated to 1000 psi at 450°F and available for casing sizes 7" to 16". The system allows the setting of the packer to a depth of 60 feet down the wellbore, once set and pressure is relieved; the packer is released and left in hole. This enables TNG to safely repair and provide wellhead maintenance to the well.

TNG crew running in hole to set the GWERT at 50' depth ▼

“ TNG has been a vendor for us for nearly 12 years. They have always been very professional and great to work with. They make safety a priority on their jobs and they stand by their product 100%. They are always willing to work with you to get through those tough jobs. ”

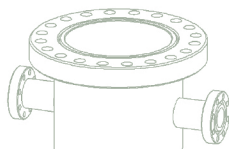

Lucas Cole
Calpine Corporation
Maintenance Manager

VALVE & WELLHEAD SALES

TNG offers a full suite of new manufacture and re-manufactured valves and wellheads for sale to meet all of your geothermal well design needs.

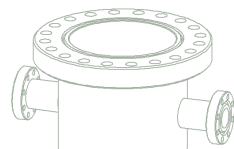

Re-manufactured valves are tested and certified, often priced 25 – 40% less than new and are available in much shorter lead times.

FABRICATION & RE-MANUFACTURING

TNG has a full service machine and welding shop capable of producing or rebuilding common and highly specialized geothermal products. Visit our website for more specific information about our machine and welding capabilities.

WELL SITE SERVICE, REPAIR & INSPECTION

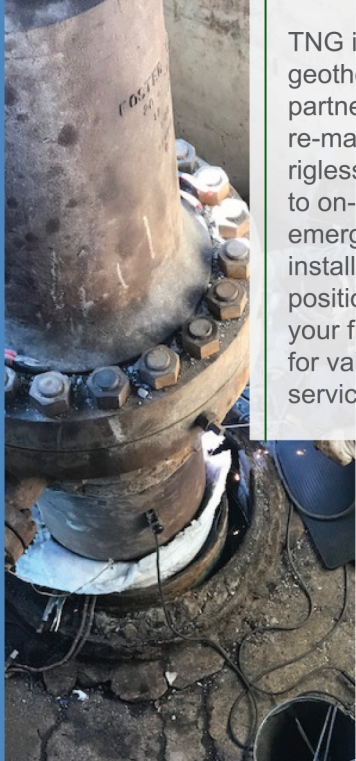

TNG offers a complete geothermal wellhead maintenance program, providing equipment and field service in all phases of well maintenance from inspection to actual valve servicing and troubleshooting.

PARTNERS

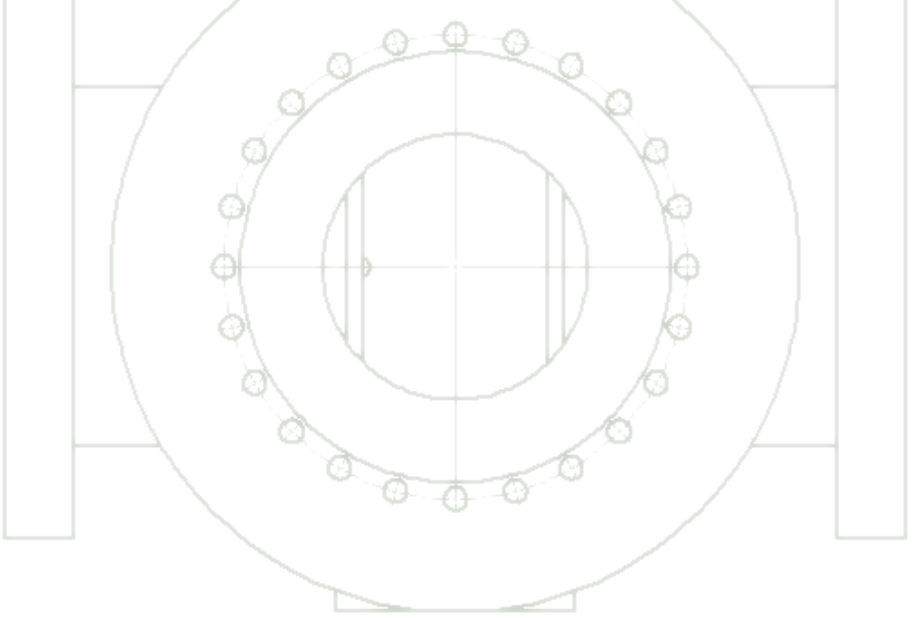

TNG is a full-service geothermal wellhead partner, from re-manufacturing to rigless replacement, to on-site welding and emergency pack-off installation. TNG has positioned itself to be your first and only call for valve and wellhead services and supply.
