# PLASWELD 7000 PLASMA TRANSFERRED ARC

## NEW WELDING CAPABILITIES

TNG Energy Services has always been a leading valve and wellhead re-manufacturing and repair service partner for the geothermal industry.

As a sign of commitment to this industry leadership, TNG has invested in a Plasweld 7000, Plasma Transferred ARC (PTA) welding machine from Duramet that enables us to work more efficiently, reduce waste, limit error and offer even more robust hard-facing capabilities.

Most Geothermal resources have long been corrosive to valves and wellhead surface equipment. Now, TNG offer's a full suite of anti-corrosion hard-facing, such as tungsten carbide, Stellite 21, Stellite 6 and Inconel suitable for any geothermal project worldwide. Contact us to learn more.
